

\$100,000 to address safety issue at Anglesea beach access

Great Ocean Road Coast Committee is undertaking over \$100,000 of risk mitigation works to repair the Anglesea beach access ramp and manage cliff erosion.

Works, funded by the Victorian Government's Coastal Environments Program through the Department of Environment, Land, Water and Planning (DELWP) and the Great Ocean Road Coast Committee, will commence **Monday 12 December and will be completed in time for Christmas.**
Closures: Works will see the closure of parts of 4 Kings Carpark and exclusions to some sections of the beach during the works period to allow for truck movements. **The Surf Coast Walk will remain open.** An excavator and dump truck will transport rocks to the work site to construct the rock wall and back-fill it with sand. The rock wall has been designed by a coastal engineer and in consideration of cliff geomorphology and sea and wave conditions. The beach access ramp will also be repaired to maintain safe pedestrian access to the beach. These works will reduce further erosion and make the area safe and accessible for the community.

Works follow detailed surveys from coastal engineers, following severe erosion to the cliff area over the past two years. Great Ocean Road Coast will discuss longer-term management options at this site in early 2017. Alternate beach access is as below.

We thank you in advance for your understanding in completing this important work. For further information about the project contact the Great Ocean Road Coast Committee at www.gorcc.com.au.
